

# IB® HD Poly Separator Sheet

## Product Description:

IB HD Poly Separator Sheet is a heavy duty 16 oz. polyester based woven fiber sheet that is used as a separation layer between IB membranes and incompatible or contaminated materials and surfaces. It can also serve as a protection layer between overburden items such as stone ballast, wood decking, pavers, etc. IB HD Poly Separator Sheet is an ideal cushioning layer for ballasted assemblies over concrete decks.

## Packaging:

IB HD Poly Separator Sheet is palletized and shrink wrapped 10 per pallet. IB Poly Separator Sheet rolls are 90" wide x 150' long and weigh an average of 135 lbs. per roll.

## Use:

For use as a heavy-duty separation layer between compatible and non-compatible roofing components. It can also serve as a protection layer between overburden items such as stone ballast, wood decking, pavers, etc. IB HD Poly Separator Sheet is an ideal cushioning layer for ballasted assemblies over concrete decks. Contact IB Technical Services department for more details.

## Application:

Install full width rolls lapping a minimum of 2" on sides and ends from low point of roof. Preliminarily fasten with IB approved fasteners and 3" round insulation plates sufficiently to hold in place. Intended for simultaneous attachment with an IB membrane or may be loose laid in conjunction with ballasted assemblies or between membrane and overburden constructions.
