

WHY IB PVC?

We have manufactured a roofing solution to protect and provide years of low maintenance, energy savings, easy installation and environmentally friendly.

✓ TOTAL PROTECTION

IB Roof Systems provides complete system solutions coupled with the confidence of up to a 30 year Total System Warranty.

✓ FIRE RESISTANCE

IB PVC roofing membranes can be used in many UL Class A roof assemblies. IB PVC roofing membranes have passed stringent fire testing standards at both UL and FM, and are approved for use in Low, Steep and Unlimited slope assemblies.

✓ ENVIRONMENTALLY FRIENDLY

IB PVC's high solar reflectivity reduces energy waste, lowering monthly heating and cooling costs. Additionally, it is one of the few building materials that can be fully recycled into new roofing products, even after decades of service life.

✓ STRENGTH

IB Roof System's products are specifically engineered for strength and our PVC roofing membranes far surpass the minimum ASTM standard (200 lbf/in. rating), having a minimum typical breaking strength of 332 lbf/in. or higher. **Not ANY PVC is built like IB PVC.**

✓ DURABILITY

IB Roof System's membranes use heat-welded seams, forming a permanent, watertight bond that is actually stronger than the membrane itself. Other roofing systems rely on adhesives, tapes, and caulks to seal the seams, and are inherently less durable.

✓ WIND RESISTANCE

With their engineered strength and heat-welded seams, IB Roof System's PVC roofs have superior wind uplift resistance.

✓ HIGH PERFORMANCE

IB PVC membranes stand up to constant dampness and ponding water, and resist the effects of severe weather extremes.
There are no exclusions in our warranty for ponding water.

WHAT IS TPO? A commodity priced alternative...

The cheapest roof is rarely the least expensive. While the marginal, less upfront cost of TPO vs. IB PVC roof, the long-term benefits that will be sacrificed makes it an extremely bad bargain. Ultimately, the primary goal should be to design and construct a watertight roofing system and a more comfortable environment for occupants, but will save the owner or operator money and trouble in the long run. IB PVC roofs do just that. **Discover the Difference!**

What Makes IB Different?

IB Roof Systems PVC/ChemGuard™ roofing materials are designed to protect and extend the life of your restaurant or industrial building's roof. From the highest fire-ratings and no flame support, weather resistance, ease of maintenance to energy efficiency, IB provides restaurants and industrial buildings the maximum protection and longest performance history of quality roofing solutions possible, **IB Roof Systems is the right choice.**

The True Grease and Oil Resistant Roof Solution.

CHEM GUARD™
DuPont® Ethylhexyl Ketone Ethylene Ester (KEE)

Protect Your Investment

Oil, grease, dirt, and the elements will greatly shorten a roof's life-span. That is why IB created ChemGuard™, the proven single-ply roofing membrane developed specifically for restaurant & industrial use.

IB's ChemGuard™ surpasses ASTM standards for superior waterproofing protection and withstands the harsh environments industrial & restaurant facilities face such as animal fats, cooking grease, motor oil, gasoline, acid rain, and numerous other harsh chemicals. Plus, its dirt release formula makes it safe and easy to simply wash away residue and build-up.

Proven Performance

IB Roof Systems integration of time-proven products with best roofing practices installed by quality driven IB Authorized Installers adds up to a roof with better durability, better efficiencies and potential savings through reduced utility and maintenance costs.

Tougher than Nails. Literally.

There's a reason over 90% of all IB Roof Systems roofs are still performing after more than 30 years. **They're built to last.** IB membranes are reinforced with a cross-hatch membrane (scrim) that enhance resistance to the punctures and tears that can be caused by rooftop technicians servicing equipment.

LONGEST INDUSTRY WARRANTY
Our PVC provides the longest, most durable solution in the industry and offers material, labor and material and Total Systems warranties.

ENERGY EFFICIENCY
IB PVC solutions can reduce energy bills, air conditioning/heating expenses, and overall maintenance and operation costs.

FIRE SAFETY
Our tested PVC materials do not support flame. Once the flame source is removed, our membrane will self-extinguish.

Exceptional Service & Support

- 04** National Distribution Centers
- 05** Inside Sales Customer Support
- 07** National Field Inspectors
- 12** Hours a day of service 7-7 cst
- 24** National Sales Reps
- 40** Years of Unmatched Service

Quality Products Since 1978

IB Roof Systems has been producing top-tier PVC roofing materials for over 40 years.

Compare the Details

IB's roofing materials exceed industry standards and ratings in every area. With certifications and code approvals from all major roofing institutions.

- 250% Thicker*
- 360% More Reliable Seams*
- 266% More Pliable*
- 164% More Durable*
- 270% Stronger*
- No Flame
- Reflective
- Resistance
- UV Resistant
- Recyclable

*Based on IB 80 mil membrane specifications

Choices Matter.

No other manufacturer has the performance history, 8 in-stock color membranes, full line of accessories (in matching colors) that are delivered to your project from one place.
